About Allergology International

Allergology International is the official journal of the Japanese Society of Allergy and publishes original papers dealing with the etiology, diagnosis and treatment of allergic and related diseases. Papers may include the study of methods of controlling allergic reactions, human and animal models of hypersensitivity and other aspects of basic and applied clinical allergy in its broadest sense.

The Journal aims to encourage the international exchange of results and encourages authors from all countries to submit papers in the following three categories: Original Articles, Review Articles, and Letters to the Editor.

The acceptance criteria for all papers are the quality and originality of the research and its significance to our readership. Except where otherwise stated, manuscripts are peer reviewed by two anonymous reviewers and the Editor.

Emerging roles of eosinophils in allergic inflammation

Prof. Masaharu Ueki discusses the roles of eosinophils in allergic inflammation. Eosinophils are known to be involved in allergic inflammation, but their roles are becoming increasingly clear. The review discusses the role of eosinophils in allergic inflammation and the emerging roles of eosinophils in allergic inflammation.

Role of alternatively activated Th2 macrophages in allergic conjunctivitis
This review discusses the role of alternatively activated Th2 macrophages in allergic conjunctivitis. The review discusses the role of alternatively activated Th2 macrophages in allergic conjunctivitis and the emerging roles of eosinophils in allergic inflammation.
